, Ubuntu 15.10? glaucoma: ubuntu 15.10 is not supported anymore, use a more recent release. i have 32-bit processor dudu, think you might be ok on 15.10. it's old but shouldn't give you much grief dudu: do you have a 64-bit CPU? Lion2: yes Lion2: Intel(R) Core(TM) i3-4330 CPU @ 3.10GHz you're out of luck. You can only use 32-bit You'll be running a limited subset of the features of a 64-bit OS. ok dudu: the other option is to install Ubuntu 15.04. that's an old release, but it's still supported That version of Ubuntu uses the 32-bit compatible "i686" architecture which should run the same code as a 32-bit version of Windows 8.x. i dont want to deal with the mess - i just want to install the fresh software Yeah, well you'd have to install the 32-bit version. You'll have to run everything as a 32-bit application but i must install all the packages and install it again Yeah, that's a problem. Lion2: i did a fresh installation and i am using Mint 17.3 That's a custom version of Ubuntu, dudu. Lion2: this is my mistake Lion2: mint 17.3 has no package repository Lion2: i want to run Ubuntu Yeah, that's just a version of Ubuntu based on Ubuntu 14.04 LTS dudu: I'm sorry, I didn't notice 82157476af
